

Sir Hrishi Mukherjee I bases himself out of Ottawa, Canada. He is an avid sailor, artist, mathematician, poet, and ai enthusiast.

Page 74 the sequel to Civil War creates the Triade between the Earth Moon Mars system of objects using a five to seven part model of motion with pre-computed values on the scale of General Relativity, that is, creating a triangle not in a linear space, but in a multi-dimensional space, where a triangle need not be perfectly symmetrical. The Pyramids of Giza reflect this perfectly and the author argues that we have accomplished interstellar travel already as a consequence of the explosion of civilization in the past precedence. The Pyramids of Giza are studied extensively and super-imposed on the General Relative scale of model of motion Triade, Earth Moon Mars. Hopefully this will allow for the extended travel times between planetary systems to be condensed to a bearable level.
